MindWell AI — LEAN CANVAS (SDG 3: Good Health & Well-being)

Project: AI-Agent for Mental Health Screening & Youth Well-being Support | **Framework:** Ash Maurya's Lean Canvas Model

1. PROBLEM

• 1 in 7 youth experience mental disorders (WHO), largely untreated due to stigma.
• Severe shortage of campus counselors (months-long waitlists).
• High private therapy fees ($100-$200/hr) unaffordable for students.
• Untreated anxiety turns into somatic illnesses (tension headaches, fatigue, insomnia).

Existing Alternatives:

Overbooked school clinics, anxiety-inducing web searches, untrained peer chats.

4. SOLUTION

• Empathetic AI check-in companion for youth academic burnout and stress.
• Validated clinical screeners (PHQ-9 & GAD-7) with instant risk grading.
• Early symptom triage agent evaluating somatic complaints against red flags.
• Interactive somatic regulation: 4-7-8/box breathing pacer & 5-4-3-2-1 grounding.
• Instant safety trigger connecting users directly to verified crisis hotlines.

8. KEY METRICS

• Daily active check-ins & conversation depth.
• Assessment completion rate (PHQ-9 / GAD-7).
• Crisis interventions successfully routed to emergency hotlines.
• Somatic calming tool usage (breathing cycles completed).

3. UNIQUE VALUE PROP.

"24/7 private, judgment-free AI mental health check-ins, standardized clinical screening, and early disease guidance in every youth's pocket."

High-Level Concept:

A confidential first-line digital clinical triage nurse and emotional wellness companion aligned with UN SDG 3.

9. UNFAIR ADVANTAGE

• 100% serverless Vercel edge architecture with zero heavy dependencies.
• Dual-engine fallback: live Google Gemini 1.5 LLM + offline clinical heuristic engine (zero 500 errors).
• Evidence-based clinical psychometrics (PHQ-9 & GAD-7) rather than generic open-ended chat.

5. CHANNELS

• Student unions, campus mental health clubs, university orientation events.
• Peer wellness forums (Reddit r/mentalhealth, student Discord & Telegram).
• Instant frictionless web app deployed on Vercel (no app-store download required).
• Partnerships with student welfare organizations & youth NGOs.

2. CUSTOMER SEGMENTS

• High school & university students facing exam pressure, burnout, or social anxiety.
• Young adults seeking confidential mental health guidance without stigma.
• Educational institutions and student wellness departments.

Early Adopters:

College students actively studying for competitive exams seeking 24/7 private stress check-ins.

7. COST STRUCTURE

• **AI Inference:** Google Gemini 1.5 Flash / OpenAI edge calls (free tier / micro-costs).
• **Cloud & Compute:** Vercel serverless edge deployment (scalable free-tier to low-cost).
• **Clinical Review:** Licensed psychologist periodic content audits & safety guidelines.
• **Maintenance:** Open-source maintenance, domain, and security audits.

6. REVENUE STREAMS

• **Free Tier (B2C):** 100% free core wellness screening & self-care for all students (SDG 3 public health mission).
• **Campus B2B Licensing:** White-label mental health portal for universities with anonymized aggregated cohort analytics.
• **Telehealth Referral Network:** Optional affiliate referrals to verified certified human therapists for moderate-to-severe cases.
• **CSR & Health Grants:** UN SDG innovation grants and corporate employee wellness funding.
